

Ensio FireArms
KAR-21
Käräjämies Automatic Rifle

The KAR-21 is a modern multi-caliber rifle system designed to use two different sized cartridges from the same weapon. A reliable and functional weapon is easy to field strip without tools.

With just one tool, you can change caliber from .223 Rem to .308 Win.

Compared to its competitors, the recoil control of the rifle is easier to handle because the barrel line is below the stock line. The full-length, monolithic upper frame with the Stanag 4694 picatinny rail allows a firm attachment for optics and night vision devices.

A muzzle brake and a silencer can be attached to the weapon.

For the silencer, the gun has an adjustable gas port - we recommend to use blow-through silencers.

The use of the weapon is designed for both right- and left-handed use.

Several sling mounts for versatile attachment of the sling.

Designed and manufactured in FINLAND.
